TASK 5

Capstone Integration & Portfolio Finalization

Master GitHub Portfolio Plan • README Draft • Reflection Template

Goal
Bring the internship projects into one clean, professional portfolio that lets a recruiter understand the work, reproduce the analysis, and find each project quickly.

1. Suggested GitHub Repository

Repository name: YourName-Data-Analyst-Internship-Portfolio
Short description: Data analytics internship portfolio covering KPI analysis, interactive dashboarding, data storytelling, and statistical validation.

2. Recommended Repository Structure

```
YourName-Data-Analyst-Internship-Portfolio/
■■■ README.md
■■■ task-1/
■ ■■■ README.md
■ ■■■ files/
■■■ task-2/
■ ■■■ README.md
■ ■■■ files/
■■■ task-3-deep-dive-dashboard/
■ ■■■ README.md
■ ■■■ report/
■ ■■■ data/ # anonymized or public data only
■ ■■■ notebooks/
■ ■■■ dashboard-link.txt
■■■ task-4-storytelling-testing/
■ ■■■ README.md
■ ■■■ presentation/
■ ■■■ analysis/
■ ■■■ results/
■■■ task-5-reflection/
■ ■■■ learning-reflection.md
■■■ assets/
■■■ screenshots/
```

3. Master README.md Draft

About
This repository contains my Data Analytics Internship portfolio. It documents the analytical process, tools used, findings, and business recommendations from the internship projects.

Projects
Task 1 — [Project title]: [Problem, dataset, tools, key output].
Task 2 — [Project title]: [Cleaning, transformation, and analysis performed].
Task 3 — Deep-Dive Analysis & Dashboarding: KPI definitions, funnel/cohort/segment analysis, and interactive dashboard link.

Task 4 — Data Storytelling & Statistical Validation: presentation narrative, hypothesis test, interpretation, and recommendation.

Tools
Python, pandas, NumPy, Matplotlib/Seaborn (if used), SQL, Excel, Power BI/Tableau/Looker Studio (list only tools actually used).

How to use this repository
Open each task folder and read its README for the problem statement, data source, methodology, instructions, and outputs. Do not upload private, confidential, or personally identifiable data.

4. Quality & Professionalism Checklist

■ All repositories have clear names and descriptions.
■ README includes problem, dataset/source, tools, steps, findings, limitations, and screenshots.
■ Notebooks run from top to bottom without hidden local dependencies.
■ File paths are relative; secrets and API keys are excluded.
■ Dashboard links have viewer permissions and are tested in a private/incognito window.
■ Charts have labels, units, titles, and readable legends.
■ Data source and license are documented.

5. Final Review & Reflection Template

What I learned: [Write 3–5 specific skills practiced.]
Most challenging problem: [Explain the issue and how it was resolved.]
Key analytical insight: [State the insight supported by actual evidence.]
What I would improve: [Name a limitation and a practical next step.]
Tools I used independently: [List only tools you can explain and demonstrate.]

6. LinkedIn Post Draft

I’m sharing my Data Analytics Internship portfolio, which brings together my work on data preparation, KPI analysis, dashboarding, data storytelling, and statistical validation. The projects helped me practice turning data into clear findings and practical recommendations. I’m continuing to improve my analytical workflow and presentation skills. Portfolio: [add GitHub link]. #DataAnalytics #Python #PowerBI #LearningByDoing

Deliverables checklist

■ Master GitHub repository published
■ Task-specific repositories/folders linked
■ README and project files reviewed
■ Dashboard and presentation links tested
■ 3–5 minute portfolio walkthrough recorded
■ LinkedIn post customized and published if appropriate

Important: This is a portfolio starter document and README draft, not a live GitHub repository. Add your real name, project files, valid links, and actual results before submitting.
